

KONGSBERG
AUTOMOTIVE

FLUID TRANSFER SYSTEMS

Ultra High Performing Fuel Line

FEATURES AND BENEFITS

Connections

- Ability to be connected to all kind of (quick) couplings

Steel and fluoro-comp® tubing

- High form integrity combined with flexible element to balance out engine tolerance stack up
- Excellent installation capability on the engine
- Transfers the most aggressive fuels under the most extreme running conditions
- Temperature resistance up to 260 C
- High pressure and high impulse resistance
- Extreme high permeation resistance in case of alternative fuels used in diesel engines
- Provides extreme clean insides and rust resistance
- Damping effect on system pressure peaks
- Ultra long lifetime

Product Description

Kongsberg Automotive produces a wide range of fuel lines for powertrain and chassis to transfer fuel between the various modules in the fuel system such as feed-, return-, vent- lines from/to tank, filters, pumps and injectors.

Extensive use of standard- and advanced materials and components guarantee the safety and support to meet tight emission regulations around the world, with various bio fuels blends under severe running conditions.
